

## SYNGAS-RT-201 & SYNGAS-RT-202

### Use: Alkali-Promoted Nickel-Based Steam Reforming

Syngas-RT-201 & 202 catalysts are the ultimate solution for steam reforming of light feedstocks such as natural gas. These unreduced Nickel catalysts are alkali-promoted and designed for use in tubular reformers downstream a pre-reformer.

They can also be used along with Syngas-RT-204 catalyst in the bottom of the reformer tubes for reforming of feedstocks with heavier hydrocarbon.

The advanced formulation and processing technology of these catalysts ensure exceptional performance with minimal carbon formation, making them the most efficient and reliable choice for long-term operation.
